

Create Tables

❖ Customers

Query:

```
create table raw.customers(  
  customer_id int primary key,  
  customer_name string,  
  region string  
);
```

❖ Products

Query:

```
create table raw.products(  
  product_id int primary key,  
  product_name string,  
  category string,  
  price number(10,2)  
);
```

❖ Sales

Query:

```
create table raw.sales(  
  Sale_id int primary key,  
  Customer_id int,  
  Product_id int ,  
  Sale_date date,  
  Quantity int,  
  foreign key (customer_id) references raw.customers(customer_id),  
  foreign key (product_id) references raw.products(product_id)  
);
```
